josh guarantees efficiency and savings to the Italian Navy: says Gartner

A recent article written by Gartner which mentions the Italian Navy's experience talks about how the adoption of the it Consult josh platform guarantees high levels of efficiency and consistent savings

Urbino, October 6, 2010 – In Gartner's recent article, *Five Examples of Administrative Cost Savings in Government Through Investments in IT-Enabled Process Redesign*, the Italian Navy is mentioned as a case of international excellence having succeeded in obtaining high efficiency and consistent savings through the introduction of new Business and Document Management technologies.

In fact, the article points out how the Italian Navy has obtained savings thanks to the adoption of the **josh** platform integrated with Microsoft SharePoint.

it Consult, a leader in software for leader Knowledge, Business Process, Workflow and Document Management, thus obtains additional international recognition in the effectiveness of its products.

Giovanni Marrè, managing director of it Consult, expresses his satisfaction with Gartner's remarks:

*"Gartner has demonstrated that the Navy's adoption of our technology has brought with it an immediately measurable economic return. The signal sent is important: **josh**, a software which mainly targets business personnel in search of greater reactivity and efficiency in their processes and also responds to a primary need which in recent years involves IT: cutting costs." When asked about the value of the case-study, Marrè adds: *The lesson to be learned certainly regards the public administration where the margins for improvement are greater, but is it also important for industry and finance to understand that savings can be obtained not only by reducing IT costs but also by making new investments capable of significantly containing the operational costs of the entire organization by establishing a financial lever action. The other general indication that Gartner gives us is to consider the positive organizational implications that the automation of the processes present for the tasks, roles and personnel competences.**

it Consult

it Consult (www.itconsult.it), is one of the main suppliers of Knowledge Management solutions in Italy. It offers design and development services for integrated software solutions for medium and large organizations as well as consulting in specific fields like Knowledge Management, Workflow Management Systems and Document Management.
