

josh InfoSign

Complementary tools for **josh**

Digital signature, Time stamp available everywhere.

Always compliant with Italian legislation.

Remote or graphometric: unlimited signature with InfoSign.

Digital signature, as simple as if it were paper. But much more powerful!

WHAT IS JOSH INFOSIGN?

josh InfoSign is a josh software module used to carry out all Digital Signature and Time Stamp operations, as well as the reading and verification of signed and/or marked files and related signature and brand certificates. Thanks to the intuitive user interface of josh InfoSign, signing an electronic document is easier and faster!

josh InfoSign is available in three editions: the Standard edition is a powerful tool capable of signing directly on the Microsoft SharePoint Document Library, fully integrating with the Electronic Invoices of josh Archive!, with the IT protocol of josh Protocol! and with Windows Explorer.

josh InfoSign supports the Remote Signature functions, which allow to digitally sign without using a physical smart card but simply by logging in with your credentials. InfoSign can also interface with Microsoft Outlook thanks to the new Add-In, thus making the signing of attachments and sending by mail a much faster operation; in fact, thanks to this component, it is possible to sign attachments directly from the internal mail program. The signed documents will then be immediately

Total integration with josh
Compliance with standards
SharePoint integration

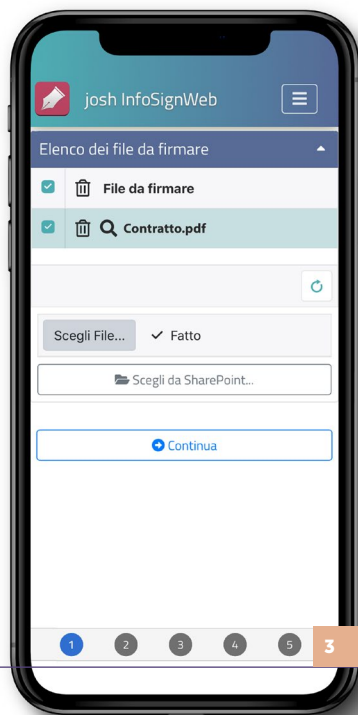

available for response or forwarding.

In the Premium edition, InfoSign includes graphometric signature features, making signature operations simple and natural, just as if the document were paper, but with all the advantages of archiving, security and compliance. josh InfoSign Premium is the ideal tool to accompany the electronic document with a graphometric signature, affixed with a special pen to a tablet or a computer with touch-screen, thus giving the subscription full legal validity. josh InfoSign is ideal for online and on-site signing of contracts, documents such as disclaimers, packing slips, transport documents, and even invoices.

The Web edition of josh InfoSign is also available with the Standard and Premium edition, which allows to sign any document on your device or in Microsoft SharePoint (or SharePoint Online), anywhere and with any device. josh InfoSignWeb makes it possible to sign without having to install any application, simply by exploiting the flexibility of remote signature.

MAIN FEATURES

- Integration with josh processes, from which it is possible to directly invoke signature or verification operations, relieving the user of all the worries of saving and uploading
- Compliance with all Italian regulations, in particular, the technical specifications of the new Digital Administration Code
- PDF (PAdES), XML (XAdES) and .p7m (CAAdES) signature support
- Sign and view documents directly from Microsoft SharePoint and Outlook
- Massive signature functionality (sign multiple documents by entering the PIN only once)
- Compatibility with a wide range of Smart Cards and related Readers or Signature Tokens
- Possibility of graphometric signature with detection and encryption of biometric data that guarantee the authenticity of the handwritten signature, in compliance with Italian regulations (josh InfoSign Premium)
