

josh Scanner

Complementary tools for **josh**

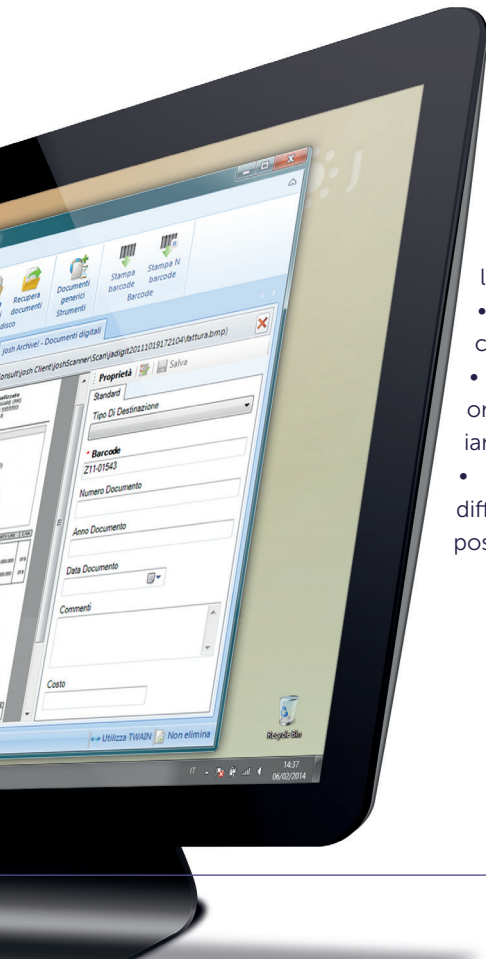

josh: one Brand, one Technology
one Solution

MAIN FUNCTIONS

- Direct support of scanners with TWAIN and/or ISIS drivers and the possibility of processing the scanned files with other tools and taken from network folders.
- When necessary, filing and publication on SharePoint of digitalized documents through uploading to SharePoint and advanced management of the document properties.
- Detection of the most commonly used types of barcode, including 2D (for josh Archive! and josh Protocol!).
- Management of the scan by lots: allows acquisition and management of multipage scans, also made with network scanners, production of many separate documents and associating common metadata to the individual documents in the lot.
- Insertion of scanning operations and filing/publishing of the documents within any josh process.

- Automatic assignment of properties to documents to be filed in Microsoft SharePoint starting from the value of the corresponding josh process variables.
- Printing of labels with barcode for josh Archive!.
- Generation of recording/registration mark labels with barcode, personalizable.
- Start-up of josh processes during the scan completion phase (recording/registration).
- Support for digital signature and time stamp on documents in full compliance with the Italian legislation in force.
- The scanned documents can be saved in different formats: TIFF, PDF, PDF/A, all with the possibility of being digitally signed.
